

SHOTCRETE MACHINES

ALIVA EQUIPMENT: LEADER IN QUALITY AND INNOVATION

Aliva®-237

The small

A compact concrete spraying machine for shotcreting dry and occasionally wet mixes. With a range conveying capacity from 0.4 to 4.0 m³/h, the machine is ideal for smaller shotcrete applications.

Applications

- Dry-shotcrete (wet-shotcrete)
- Canal renovations
- Concrete repair
- Swimming pools
- Refractory applications

Aliva®-257

The All-rounder

With an incredible output capacity range of 0.7 - 9.6 m³/h (with 3 rotor sizes) the machine works on small renovation work as efficiently as on excavation support or in mining. This makes it the ideal shotcrete machine for many applications.

Applications

- Dry and wet shotcrete
- Canal renovations
- Concrete repair
- Swimming ponds, pools
- Artificial rocks work
- Slope stabilization and excavation support

Aliva®-264

The User-friendly

Cleaning and maintenance has never been easier than with this machine and it can all be done by just one person. The HPO, Hopper Power Opener, makes light work of opening the hopper. Optionally there is the RLC, Rotor Lifting Crane, which is a lifting device to facilitate removing the rotor. The two speed settings allow different output capacities of up to 13.1 m³/h.

Applications

- Dry and wet shotcrete
- Slope stabilization and excavation support
- Rock support
- Mining, tunnelling

Aliva®-267

The Powerful

The modular design of the AL-267 means that it can be adapted to every need. It is even equipped with an integrated accelerator ump that can be synchronised. With an output capacity of up to 21 m³/h, it is suitable for all large shotcrete applications.

Applications

- Dry and wet shotcrete
- Slope stabilization and excavation support
- Rock support
- Mining, tunnelling
