

Accessory kit for Aliva[®] -257

RUBBER SEALING PLATE SET FOR ALIVA ROTOR MACHINES

■ For oven-dry and earth-moist materials

The new accessory kit for rubber sealing plates from Aliva has been specifically designed for the Aliva[®]-257 Electro and Air rotor machine and is recommended for working with oven-dry to earth-moist materials.

■ Also for machines already in use

The accessory kit can be installed quickly and conveniently on machines that are already in use.

■ Rubber plates can be reground up to 2 times

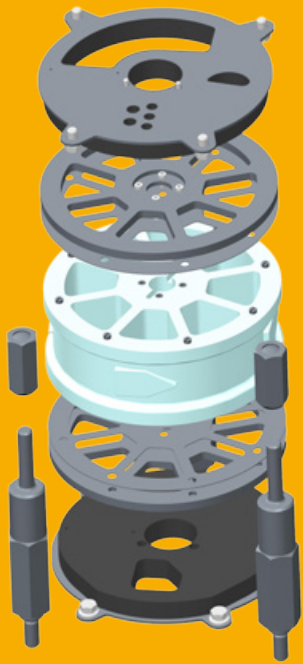

Cost-efficient thanks to regrindable rubber plates.

Aliva[®] accessory kit with rubber sealing plates

The new accessory kit from Aliva with innovative rubber sealing plates was designed specifically for the Aliva[®]-257 rotor machine and is recommended primarily for processing oven-dried materials. With the new rubber sealing plates, earth-moist materials can also be conveyed in the thin stream process. The same machine can also be used to apply wet shotcrete using the steel sealing plate kit. For the best spraying results, we recommend using the Aliva conveying hose for thin stream and the Aliva[®] Converto spraying device.

FOR OVEN-DRY MATERIAL

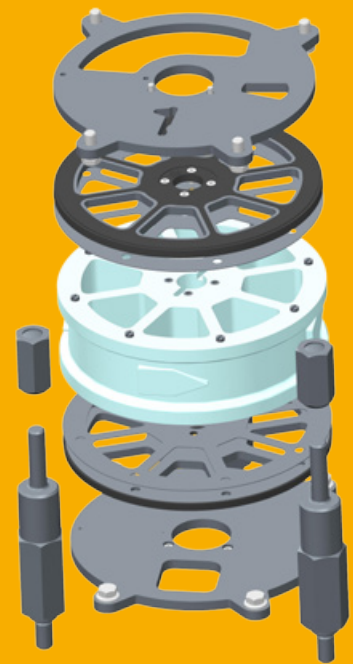

Rubber sealing plate set for 2.5, 6 and 12 liters

ACCESSORY KIT

Accessory kit for sealing plates

FOR WET SHOTCRETE MATERIAL

Rubber sealing plate set for 2.5, 6 and 12 liters
